

ANNURTROFIL®

For strong hair. Like you.

A powerful formula designed to support hair health at a cellular level.

For a man, hair is much more than appearance: it reflects strength, vitality, and confidence. When thinning or receding begins, the perception of self changes.

Annurtrofil® was designed to address this challenge with a unique and science-backed approach: the full Annurca apple phytocomplex (natural extract rich in active compounds) working together to restore hair strength at its roots.

evra

ANNURTROFIL®

Unlike isolated extracts, the Annurca apple phytocomplex delivers a synergistic action, driven by its main bioactives, such as **Procyanidin B2, Chlorogenic Acid, and Total Polyphenols**. This combination stimulates the anagen phase of the hair cycle, protects follicles from oxidative and cellular stress, and boosts mitochondrial energy, powering the regrowth process.

In men, the first signs of hair weakening often appear as reduced thickness, increased shedding, or early receding at the temples. These changes are not yet pathological but can affect confidence and wellbeing. Annurtrofil supports the hair at this “borderline” stage, where strength and vitality need reinforcement. By boosting mitochondrial energy, protecting against oxidative stress, and prolonging the natural growth phase, the Annurca apple phytocomplex helps preserve density and resilience, keeping hair visibly stronger for longer.

Annurtrofil® — Proven Results*

Enhances scalp microcirculation to deliver nutrients directly to follicles — effective, proven, and research-based. Stronger, thicker, and more resilient hair, backed by science:

- **+14%** hair density
- **+34%** hair weight
- **-33%** hair loss (wash test)
- **-26%** hair loss (pull test)

Suitable for galenic forms: tablets, capsules, powder in stick and sachet.

Recommended dosage: 2x400 mg/day

Choose Annurtrofil®:
where nature, science, and beauty
come together to give your hair the
strength and vitality it deserves.

Scientific Evidences

In vitro studies demonstrated that the Annurca apple phytocomplex directly **stimulates hair follicle cells**, protecting them from oxidative stress and promoting energy production.

In vivo animal models confirmed **increased hair density and improved follicle vitality** after supplementation.

A clinical study showed significant improvements in **hair growth, thickness, and overall scalp health**, validating the in vitro and in vivo findings in real-life conditions.
